Fishery Statistics of the United States and Alaska are compiled and published annually to make available information on both the economic and biological aspects of the domestic commercial fisheries.

Data on the economic aspects are necessary to persons engaged in the commercial fishery and to governmental agencies concerned with its regulation and protection. Those here given cover the total catch and value by species, the yield and value of manufactured products and byproducts; the employment of men, craft, and gear in the capture of fishery products; and related information.

From the biological standpoint these data are important to sound fishery management in providing detailed information on fluctuations in the commercial catch by species, locality, and gear; and on the types of gear and boats operated. They assist conservation agencies in regulating the commercial fisheries so as to produce maximum yields without depletion.

Previous statistical reports on the fishery industries were issued under the Department of the Interior in the Administrative Report series for 1938 and in the Statistical Digest series for succeeding years. Reports for preceding years were issued in the Administrative Report series of the former Bureau of Fisheries.

The following is a listing of the various Statistical Digests issued since 1939:

- No. 1 Fishery Statistics of the United States, 1939
- 2 Alaska Fishery and Fur Seal Industry, 1940

## INTRODUCTION

This report contains a review of the fishery statistics for the year 1945, collected by the Division of Commercial Fisheries during 1946. These include data on the volume of the catch of fishery products and their value, employment in the fisheries, quantity of gear operated, the number of fishing craft employed in the capture of fishery products, and certain information on the volume and value of the production of manufactured fishery products and byproducts.

Statistical surveys for 1945 data were conducted in all sections except the Mississippi River States. Statistics on the various fisheries were collected by the following field agents: F. Freeland, H. Haberland, V. E. Hefflefinger, C. B. Lowden, C. H. Lyles, D. A. McKown, C. B. Tendick, J. P. Wharton, R. H. Wilson, and F. M. Wood. The surveys in the New England States were supervised by B. E. Lindgren, those in the Middle Atlantic States by F. J. Anderson, and those in Washington and Oregon by E. C. Hinsdale. Data for the Great Lakes were assembled by the staff of Dr. John Van Oosten of the Division of Fishery Biology. Those on the fisheries of Alaska were collected by the Alaska Division of the Service.

The statistical surveys conducted during 1946, for 1945 data, were under the general direction of E. A. Power, Chief, Statistical Section, assisted by D. Y. Aska, Statistician. The survey material was assembled, tabulated, and prepared for publication by the staff of the Statistical Section under the direction of C. E. Peterson, Statistician, assisted by Elsie English, Evelyn Hecht, Melissa Tinkey, and R. M. Wilkinson. Katherine L. Howe and G. I. Sundstrom prepared many of the illustrations contained in the report.

In assembling the data on the fisheries, use was made of all records collected by the various State fishery agencies. In the Great Lakes and the Pacific Coast States, these records were such that it was only necessary for the Service personnel to conduct partial surveys. Statistics on the imports and exports of fishery products were furnished by the Bureau of the Census.

Grateful acknowledgement is extended to the State and Federal agencies and to the various individuals who cooperated in furnishing portions of the data contained in this volume.

## SECTION 1.- GENERAL REVIEW

In 1945, it was possible to conduct a complete canvass of the catch of the coastal, and Great Lakes fisheries for the first time since 1940. The only major fishery not surveyed was that of the Mississippi River and its tributaries.

With the ending of hostilities in Europe in May and in the Pacific in August, supplies of materials and manpower improved. In May, deferment regulations for men over 29 years old were liberalized, and in August all men over 25 were exempted from the draft. This, coupled with the release of men from the armed services, assisted in relieving the manpower shortage, although the number of available workers was still far below requirements in some parts of the industry. In August, gasoline, fuel oil, and canned fruits and vegetables were removed from rationing control. Some meat cuts were exempted in October; and all canned fish and meats; and fats, and oils were freed from rationing in November. Most items remained under price control throughout the year, although numerous changes in ceiling prices occurred. During the latter part of the year, prices on fresh-frozen crab meat and lobsters; and canned abalone, crab meat, oysters, clams, and fish roe; and salted lake herring were decontrolled. This action generally was taken too late in the year to affect production, but it did encourage planning for the following season.

The number of new fishing vessels rose sharply in 1945. The average number of vessels obtaining their first documents as fishing craft during the five year prewar period 1936-1940 was 365. During 1945, the number increased to 741. In addition to these new vessels, a number of craft requisitioned by the Government early in the War were returned to the fishery. The total number of vessels operating in the fishery increased from 5,562 in 1940 to 6,929 in 1945. The following table shows the number of vessels obtaining their first documents as fishing craft for a number of years. These vessels are either new craft, or vessels that had not previously been documented for fishing. It does not include fishing vessels that had been requisitioned by the Armed Services and were returned to the fishery.

Vessels Obtaining Their First Documents As

1939	357	1944	635
1940	320	1945	741

∟/ Data are partly estimated.

The total catch of fishery products in the United States and Alaska in 1945 increased over that of 1944. Although the total production was approximately a half billion pounds less than in the record year 1941, the value of the catch was the highest in history of the fishery. A sharp decline occurred in the nation's largest fishery, the Pacific Coast pilchard or sardine industry. The pilchard catch dropped from over 1.1 billion pounds in 1944 to 850 million pounds in 1945. Menhaden landings increased from 690 million pounds in the previous year to 778 million pounds, and tuna production rose from 168 million pounds to 186 million pounds.

Compared with 1940, when the last complete survey of the coastal and lake states was conducted, production shows an increase of about a half billion pounds, while the average price to the fishermen advanced from 2.44 cents per pound to 5.82 cents. When the comparison is made by individual sections, the volume of landings declined in the Chesapeake, Pacific, and Lake States, but increased in all other sections. The value of the catch in each section increased more than 100 percent compared with 1940.

During 1945 pilchard was again the most important species from the standpoint of quantity, accounting for 19 percent of the total catch. Menhaden followed with 17 percent, and salmon was third with 11 percent. From the standpoint of value, salmon was the most important, constituting 10 percent of the total. Oysters followed with 9 percent, and shrimp and tuna accounted for 8 percent each.

The total catch of fishery products in the United States and Alaska as based on surveys for 1945 in all sections, except the Mississippi River and its Tributaries, which data are for 1931, amounted to 4,575,509,000 pounds, valued at \$266,186,000. However, if 1945 data had been available for the Mississippi River and its Tributaries, it is estimated that the value would be raised to \$269,900,000 although the poundage would be unchanged. The following table, which contains recorded production for the areas in which surveys were made and estimates for other areas, indicates the trend of the yield and value of the domestic catch during recent years:

Year	Pounds	Value to the fishermen	Average price per pound
1939	4,443,328,000	\$96,532,000	2.174
1940	4,059,524,000	98,957,000	2.44
1941	5,080,341,000	134,172,000	2.64
1942	3,876,524,000	170,338,000	4.39
1943	4,202,000,000	204,000,000	4.85
1944	4,500,000,000	213,000,000	4.73
1945	4,575,509,000	269,900,000	5.82

It is estimated that 1.8 billion pounds of fish (round weight basis) was marketed as fresh or frozen products, 1.2 billion pounds was used for canning, 1.4 billion pounds for byproducts and bait, and 115 million pounds for cured products. Compared with the average of the past three years, more of the catch was utilized fresh and frozen, while somewhat less went into the preparation of canned items and byproducts.

The production of canned fishery products in the United States and Alaska during 1945 amounted to 646,386,111 pounds, valued at \$152,800,571, and the output of fishery byproducts had a sales value at processors' level of \$58,248,404. This represents a slight decrease in the poundage and value of canned products and a slightly larger decline in the value of byproducts compared with 1944.

The frozen fish trade enjoyed a record year, with total freezings amounting to 286,001,381 pounds. This was nearly 20 million pounds more than was frozen during 1944 when the former record was established.

The value of United States foreign trade in fishery products increased 22 percent compared with the previous year. Imports increased from 78.5 million dollars in 1944 to 101.2 million dollars in 1945. The value of exports increased from 36 million dollars to 38.6 million dollars. The increase in imports was primarily due to larger receipts of canned anchovies, sardines, and tuna; and fresh and frozen fish. The gain in exports was due almost entirely to increased shipments of fish and fish liver oils.

A review of the fisheries of each geographical area will be found at the beginning of each Section in this volume. Summaries of the more important specific fisheries will be found in Section 10. Summarized data on the operating units and catch have been previously published in Commercial Fishery Statistics No. 433.

## SUMMARY OF CATCH, 1945

4,575,508,983 POUNDS

\$266,186,459

## MANUFACTURED FISHERY PRODUCTS

The output of manufactured products (canned, cured, packaged, and byproducts) in the United States and Alaska during the most recent years for which these data are available was valued at \$293,095,601. Of this amount, canned products accounted for 52 percent; byproducts, 20 percent; packaged fish, 17 percent; packaged shellfish, 6 percent; smoked fish, 3 percent; and salted, pickled, and dried fish, 2 percent.

Since data were not obtained on the 1945 production of cured fishery products (salted, smoked, etc.) or packaged shellfish, and certain other items listed below, the following compilation of manufactured fishery products consists of the composite data, based on the most recent statistics available. Data on the production of canned products and byproducts are for 1945; except fresh-water mussel-shell products other than buttons, which are for 1944; information on the production of packaged fish also are for 1945, and are complete for all sections, except California; statistics on the production of cured products and packaged shellfish are for 1945 in Alaska, and for 1940 in all other sections except the Mississippi River, which are for 1931. Data on production of all products by fishermen are for 1940 in all areas except the Mississippi River, which are for 1931.

The production of canned fishery products in 1945 amounted to 646,386,111 pounds, valued at \$152,800,571. This was a decline of 12 million pounds and \$113,000 compared with the 1944 pack. Large declines occurred in the pack of salmon, mackerel, and Maine sardines. However, the pack of tuna was nearly one-third greater than in the previous year.

The quantity of meal and scrap processed during 1945 amounted to 401,350,000 pounds, valued at \$14,405,338. This represents a decrease of 25 million pounds from the 1944 production. Most types of meal registered increases when compared with the previous year, but these were more than offset by a decline of more than 25,000 tons in the production of pilchard meal.

The quantity of packaged fish produced during 1945 reached 204,932,562 pounds, valued at \$48,372,450. This represents an all-time record and is an increase of nearly 33 million pounds over the 1944 production. These figures are slightly larger than will be found in the Packaged Fish Section as that section covers continental United States and this section includes the United States and Alaska.

If data had been available on the 1945 production of cured fishery products, packaged shellfish and fishermen's prepared products, which would have eliminated the necessity of using earlier data for these items, the total value of the manufactured products shown in the following table would probably have totaled 330 million dollars.

## CANNED FISHERY PRODUCTS AND BYPRODUCTS

The output of canned fishery products and byproducts in the United States and Alaska in 1945 was valued at \$211,011,177, slightly less than in 1944. Of this total, canned products accounted for \$152,800,571, and byproducts, \$58,210,606. Compared with the previous year, this represented a slight decline in the value of the canned products and a decrease of 8 percent in the value of byproducts. The value for byproducts does not include a small quantity of mussel shell products, other than buttons, for which data are not available. These products were valued at \$37,798 in 1944.

During 1945, fishery products were canned in 360 establishments, 35 more than in 1944. The combined output of these plants amounted to 18,555,183 standard cases or 646,386,111 pounds, a decrease of 2 percent from the net weight of the previous year. Three items, salmon, 235,595,520 pounds, sardines, 220,529,712 pounds, and tuna, 88,978,464 pounds, accounted for 84 percent of the total by weight.

Fishery byproducts were processed in 320 plants, 23 less than in 1944. Marine animal oil, \$27,235,722; and marine animal scrap and meal, \$14,405,358, accounted for 72 percent of the value of the production.

Canned fishery products and byproducts were prepared in 26 states and Alaska during 1945. California ranked first in value of products, accounting for 39 percent of the total, and Alaska was second with 23 percent.

Tin conservation controls were continued during the year although relaxation in their provisions were made at the beginning of the year and additional restrictions were removed during November after the bulk of the pack was completed. Shipping cartons and boxes remained very scarce throughout the year. War Food Administration set-aside orders continued in effect. However, a number of changes were made to meet varied conditions during the year. Generally, these orders did not require that as large a percentage of the pack be reserved for Governmental purchase as in 1944. Rationing of canned fish remained in effect until the latter part of November, and major canned fish items were under price controls throughout the year. On October 31, price controls were removed from a few items such as canned abalone, crab meat, clams, oysters, and fish roe. This action, although raising the value of the pack, came too late in the year to affect production significantly.

## PRODUCTION OF CANNED FISH, FISH MEAL, AND OIL, 1921 - 1945

## PACKAGED FISH

Under the stimulus of war-created demand for fishery products, the production of fresh and frozen packaged fish (fillets, steaks, etc.) in the United States, during 1945, is estimated to have totaled 215 million pounds, an increase of 20 percent over the previous year's production. Complete information on the yield of packaged fish is not available since data were not collected on the yield in California. However, it is estimated that the production in that State totaled about 10 million pounds. The pack in the Coastal and Great Lakes regions, excluding California, totaled 204,926,699 pounds, valued at \$48,370,703.

Large increases in the production of cod, haddock, rockfish, and whiting fillets accounted for the major portion of the gain in the production of packaged fish in 1945 compared with the previous year.

As would be expected from the great interest in groundfish fillets in the New England area, New England produced the major portion (160,571,902 pounds) of the packaged fish. The Pacific Coast section, excluding California, was second (21,118,982 pounds), followed by the Middle Atlantic States (16,433,992 pounds). The most important species packaged was haddock (44,197,235 pounds), followed by rosefish (35,455,992 pounds), and whiting (29,959,365 pounds). Fillets accounted for 85 percent of the total pack; pan-dressed fish, 10 percent; split "butterfly" fish, 3 percent; and steaks, 2 percent. Forty-four percent of the total was packaged fresh, and the balance was frozen.

Statistics in this section cannot be correlated directly with those published in the section of manufactured fishery products as that section includes a small production in Alaska which is not included in the following tables. The following data have been previously published in Current Fishery Statistics No. 388.

1/ INCLUDES A SMALL QUANTITY OF ANOTHER TYPE OF PROCESSING OF THIS SAME SPECIES.

2/ BECAUSE LESS THAN THREE FIRMS REPORTED A PRODUCTION OF THIS ITEM IT HAS BEEN INCLUDED WITH THE REPORTED PRODUCTION OF ANOTHER TYPE OF PROCESSING OF THIS SPECIES. 3/ INCLUDES FRESH FILLETS OF BUFFALOFISH, CARP, SHAD, STRIPED BASS, TILFISH, TULLIBEE, AND MISCELLANEOUS SPECIES, AND FROZEN FILLETS OF SHARK AND STRIPED BASS.

4/ INCLUDED WITH MISCELLANEOUS FRESH FILLETS. 5/ INCLUDES FRESH STEAKS OF GROUPEL AND RED SNAPPER, AND FRESH AND FROZEN PAN-DRESSED CARP. 6/ INCLUDED WITH MISCELLANEOUS FRESH STEAKS, ETC.

NOTE:--THE TOTALS APPEARING IN THE ABOVE TABLE CAN BE CORRELATED DIRECTLY WITH THOSE APPEARING IN THE SUMMARY AT THE TOP OF THIS PAGE, SINCE IT HAS BEEN NECESSARY TO COMBINE CERTAIN ITEMS IN ORDER TO SHOW THE ENTIRE PRODUCTION OF EACH SPECIES. DATA ON THE PRODUCTION OF PACKAGED FISH IN CALIFORNIA ARE NOT INCLUDED IN THIS REPORT. THE PRODUCTION IN CALIFORNIA IS ESTIMATED TO HAVE TOTALLED NEARLY 10 MILLION POUNDS.

2/ INCLUDES A SMALL QUANTITY OF THIS SPECIES PRODUCED IN ANOTHER AREA WHICH CANNOT BE SHOWN SEPARATELY AS LESS THAN THREE FIRMS REPORTED ITS MANUFACTURE.

3/ NEW ENGLAND INCLUDES CARP, SHAD, STRIPED BASS, AND TILEFISH; CHESAPEAKE, SOUTH ATLANTIC, AND GULF- GROUPER, RED SNAPPER, AND STRIPED BASS; LAKES- BUFFALOFISH, CARP, SHAD, TULLIBEEES, AND MISCELLANEOUS FISH; AND PACIFIC- SHARK AND MISCELLANEOUS FISH.

NOTE:--PACKAGED FISH WERE PREPARED IN THE FOLLOWING STATES: NEW ENGLAND- MAINE, MASSACHUSETTS, AND CONNECTICUT; MIDDLE ATLANTIC- NEW YORK AND NEW JERSEY; CHESAPEAKE BAY, SOUTH ATLANTIC AND GULF- VIRGINIA, NORTH CAROLINA, FLORIDA, AND ALABAMA; GREAT LAKES- NEW YORK, PENNSYLVANIA, OHIO, ILLINOIS, MICHIGAN, WISCONSIN, AND MINNESOTA; AND PACIFIC- WASHINGTON AND OREGON.

DATA ON PRODUCTION IN CALIFORNIA DURING 1945 IS NOT AVAILABLE. PRODUCTION IN CALIFORNIA IS ESTIMATED TO HAVE TOTALED NEARLY 10 MILLION POUNDS.

## FROZEN FISH TRADE

## FISH FROZEN

A total of 286,001,381 pounds of fishery products were frozen during 1945 by domestic freezing plants that reported their activities to the government. Compared with 1944, this represented an increase of 19½ million pounds or 7 percent.

In 1945, 85 percent of the freezings consisted of salt-water fish; 4 percent, fresh-water fish; and 11 percent, shellfish. Seven items accounted for 51 percent of the total poundage frozen. These were rosefish fillets, which comprised 11 percent of the total; halibut, 9 percent; shrimp, 9 percent; whiting, 7 percent; whiting fillets, 6 percent; cod fillets, 5 percent; and silver salmon, 4 percent. Among the major species, halibut, rosefish, silver salmon, whiting, and shrimp registered increases over 1944, while cod fillets, haddock fillets, and mackerel showed declines.

According to geographical sections, the New England States again led all other sections in the freezings of fishery products accounting for 44 percent of the total. The Pacific Coast States ranked second with 18 percent, closely followed by Alaska with 16 percent.

The bulk of the production occurred between May and November, inclusive, with the largest monthly freezings occurring in July and August.

The demand for frozen fishery products remained high, but production began to catch up with demand during the latter part of the year allowing holdings to rise to record heights. Materials for plant expansion were still scarce, but some plants were able to complete additional facilities, and other plants began expansion programs. Cold storage plants were still suffering from a shortage of labor, partially due to the higher wage scales paid by other industries.

COLD-STORAGE HOLDINGS OF CURED FISH

During 1945, monthly cold-storage holdings of cured herring averaged 10,481,000 pounds, while those of mild-cured salmon averaged 3,052,000 pounds. Compared with 1944 this represented a decrease of 16 percent in the average holdings of cured herring, but an increase of 128 percent in average mild-cured salmon stocks. Holdings of cured herring were largest between May and October when holdings remained over 1½ million pounds. The largest holdings of mild-cured salmon were on December 1, when they reached 7,532,063 pounds.

# FOREIGN FISHERY TRADE<sup>1</sup>

The foreign trade in fishery products of the United States in 1945 amounted to \$139,-808,617, of which \$101,250,860 represented the value of these products imported for consumption and \$38,557,757, the value of exports of domestic fishery products. Compared with the previous year, this was an increase of 22 percent in the total trade; 29 percent in imports, and 7 percent in exports.

Fishery imports consisted of 404,768,024 pounds of edible products, valued at \$76,433,-819, and non-edible products valued at \$24,817,041.

Fishery exports were made up of 136,013,396 pounds of edible products, valued at \$30,902,819, and non-edible products valued at \$7,654,938.

A new system of classifying imports and exports has been adopted in order to clarify the data. Preliminary information on foreign fishery trade was released in Current Fishery Statistics No. 368.

<sup>1</sup> These statistics have been furnished by the Bureau of Census, Department of Commerce.

## IMPORTS AND EXPORTS OF FISHERY PRODUCTS, 1924 - 1945

## SECTION 2.- NEW ENGLAND FISHERIES

(Area XXII) <sup>2</sup>

With the easing of some of the wartime difficulties of operation, New England fishermen continued their efforts at all out production and were able to produce more fishery products than in any previous year for which records are available. Shortages of men and materials continued, but they generally were not as severe as in the previous war years. With the ending of hostilities in Europe in May, draft deferments for men 30 years of age and older were made much more liberal; and with the surrender of Japan in August, all men over 25 years old were deferred. Fibreboard, cold-storage space, refrigerator cars, rope, fishing gear, and replacement parts for engines, were among the items that were in short supply in this area.

The demand for seafoods was very good throughout the year. Meat was scarce and most fresh cuts remained under rationing during the year. Canned fish and meats; and fats and oils were removed from rationing controls during the latter part of November. Most seafoods remained under price control during the entire year, although numerous changes in the ceiling prices occurred.

The yield of the commercial fisheries of the New England States (Maine, New Hampshire, Massachusetts, Rhode Island, and Connecticut) during 1945 amounted to 845,470,600 pounds, valued at \$56,589,042 to the fishermen. This represents an increase of 18 percent in volume and 35 percent in value compared with 1944. The number of men and vessels employed was greater than in 1943, the last previous year for which information was available and was greater than the 1931-1940 average.

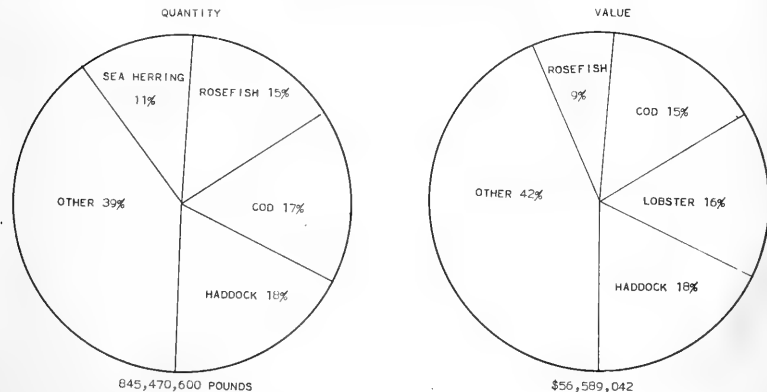

The landings of cod in 1945 were the largest for any year for which records are available since 1889, while those of lobster were the largest recorded since 1892. Landings of rosefish and whiting were the largest in the history of the fishery, and landings of a number of other varieties were considerably above normal.

The last complete survey of the fishery transporting, wholesaling, and manufacturing industries was made for 1940. In that year, 186 men were employed in the operation of 84 vessels engaged in the transporting trade, and 12,650 persons were employed in wholesale and manufacturing establishments. The latter employees received \$7,547,395 in salaries and wages during 1940. Detailed statistics on these branches of the industry for 1940 can be found in Fishery Statistics of the United States, 1944, Statistical Digest No. 16).

Condensed summary data on the operating units and catch by states of the New England fisheries have been previously published in Current Fisheries Statistics No. 426.

<sup>2</sup> This number was assigned to this area by the North American Council on Fishery Investigations. It should be explained that there are included in this area craft whose principal fishing ports are in the area but at times fish elsewhere. A notable example is the southern trawl fishery which extends into Area XXIV.

LANDINGS AT CERTAIN NEW ENGLAND PORTS <sup>3</sup>

Because of the importance of the ports of Boston, Gloucester, and New Bedford, Massachusetts, and Portland, Maine, as landing points for fishery products, detailed monthly statistics have been collected on these landings and are presented in the following pages. It should be noted that the data represent landings by both boats and vessels at each of the ports. Earlier figures for New Bedford included landings by all sizes of craft, while those for the other ports covered only landings by vessels of 5 net tons and over.

It should be noted that these figures represent actual landings which have not been converted to round weight, so that the figures are not directly comparable to catch figures shown in the General Review and Sectional Summaries.

<sup>3</sup> The reader is referred to Section 11 of this document for an account of the years for which surveys of these fisheries have been made.

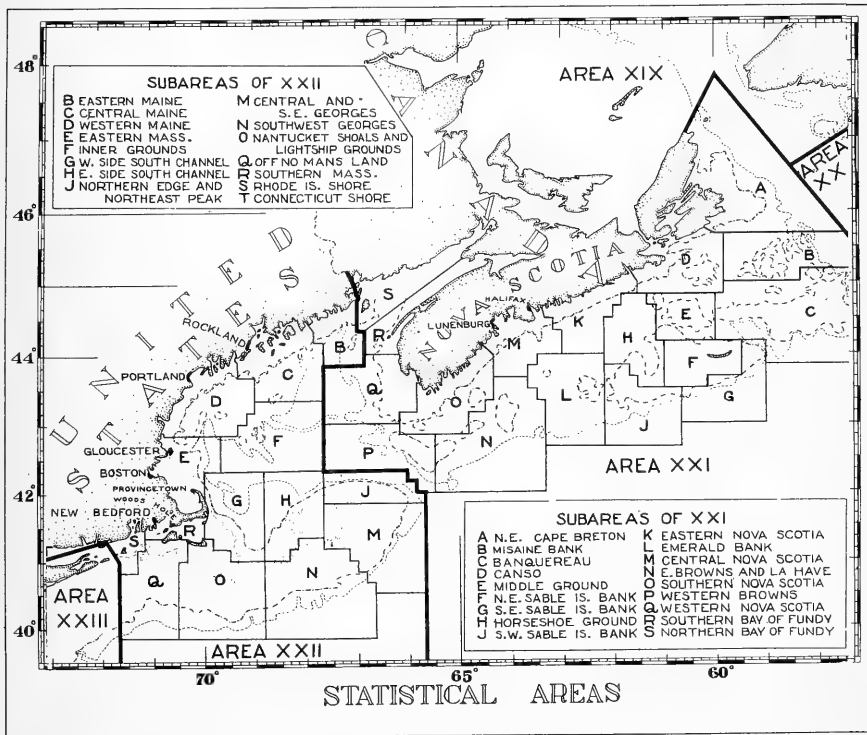

During 1945, landings of fishery products at Boston, Gloucester, New Bedford, and Portland by all fishing craft totaled 524,977,174 pounds, valued at \$34,609,727. This represented an increase of 20 percent in volume and 28 percent in value compared with 1944. Landings at Gloucester again exceeded those at Boston, although the value of the Boston landings was greater.

The fishing fleet operating on the fishing banks of the North Atlantic and landing fares at Boston, Gloucester, and Portland, during 1945, numbered 639 craft of all sizes. A total of 326 craft landed fares at New Bedford during this year. There was some duplication between the craft landing at Boston, Gloucester and Portland, and those operating out of New Bedford. The catch listed above, however, does not represent the entire catch of these vessels, since they also landed fares at other New England ports, at New York City, and at more southern ports in connection with the southern winter trawl and mackerel fisheries.

Of the total landings amounting to 524,977,174 pounds, otter trawls of all sizes accounted for 458,335,513 pounds, or 87 percent, while purse seines followed with 40,793,969 pounds, or 8 percent.

Data on landings by gear and area at New Bedford are shown separately from those at the other ports and appear in separate tables.

There is shown on the following chart the statistical areas and subareas used in reporting the catch landed at the ports of Boston, Gloucester, and New Bedford, Mass., and Portland, Maine.

2/ INCIDENTAL CATCH  
 NOTE:--OTTER TRAWLS ARE CLASSIFIED ACCORDING TO THE SIZE OF THE CRAFT. "SMALL" OTTER TRAWL CRAFT ARE THOSE UNDER 50 GROSS TONS CAPACITY; "MEDIUM," 51 GROSS TONS TO 150 GROSS TONS; AND "LARGE," 151 GROSS TONS OR GREATER. "OCCASIONAL" AFTER A SUBAREA INDICATES THAT THE CRAFT CONTRIBUTING TO THE CATCH AS SHOWN FISHED CHIEFLY WITH ANOTHER TYPE OF GEAR. IN SUCH CASES, THE NUMBER OF CRAFT FISHING, THE NUMBER OF TRIPS, AND THE NUMBER OF DAYS PRESENT ARE SHOWN UNDER THE TRIP PART OF GEAR USED. SINGLE TRIPS IS REPORTED FOR EACH VOYAGE. WHEN A CRAFT OPERATES IN TWO OR MORE SUBAREAS DURING A VOYAGE, A FRACTIONAL PART (IN TENTHS) OF THE TRIP IS ALLOTTED TO THE SUBAREA ON THE BASIS OF THE CATCH REPORTED TAKEN IN EACH SUBAREA.

1/ EXCLUSIVE OF DUPLICATION.

2/ INCIDENTAL CATCH.

NOTE:--OTTER TRAMLS ARE CLASSIFIED ACCORDING TO THE SIZE OF THE CRAFT. "SMALL" OTTER TRAM CRAFT ARE THOSE 50 GROSS TONS CAPACITY OR UNDER; "MEDIUM", 51 GROSS TONS TO 150 GROSS TONS; AND "LARGE", 151 GROSS TONS OR GREATER. A SINGLE TRIP SHOULD BE REPORTED FOR EACH CATCH OPERATES IN TWO OR MORE SUBAREAS DURING A VOYAGE, A FRACTIONAL PART IN TENTHS. THE TRIP IS CALLOTTED TO THE SUBAREA ON THE BASIS OF THE CATCH REPORTED TAKEN IN EACH SUBAREA. "OCCASIONAL" AFTER THE NAME OF A SUBAREA INDICATES THAT THE CRAFT CONTRIBUTING TO THE CATCH AS SHOWN FISHED CHIEFLY WITH ANOTHER TYPE OF GEAR.

1/ RECEIPTS OF SALT FISH FROM THE TREATY COASTS OF NEWFOUNDLAND, MAGDALEN ISLANDS, AND LABRADOR, WHICH ARE RECEIVED IN THIS COUNTRY AS PRODUCTS OF AMERICAN FISHERIES, HAVE BEEN OMITTED FROM THE LANDINGS FOR THE YEARS FOLLOWING 1941.

2/ INCLUDES LANDINGS AT ATLANTIC AVENUE IN BOSTON. PREVIOUSLY, BOSTON LANDINGS INCLUDED ONLY THOSE SOLD THROUGH THE BOSTON FISH EXCHANGE.

3/ INCLUDES LANDINGS OF CRAFT OF ALL SIZES.

NOTE:--DATA ARE NOT AVAILABLE ON LANDINGS AT PORTLAND PRIOR TO 1916.

DATA FOR THE YEARS FOLLOWING 1935 DO NOT INCLUDE DELIVERIES OF LIVERS, SPAWN OR TONGUES.

# SECTION 3- MIDDLE ATLANTIC FISHERIES

(Area XXIII) <sup>4</sup>

For the second year in succession, fishermen of the Middle Atlantic States set new records for both the quantity and value of their catch. Production during 1945 totaled 494,193,100 pounds, valued at \$23,224,189 to the fishermen. This represents an increase of 17 percent in volume and 9 percent in value compared with 1944. The value of the catch was the largest in history.

The record production, which was reached in spite of continuing shortages of men and materials, was due almost entirely to a record catch of menhaden. Landings of this specie in the Middle Atlantic States (368,121,600 pounds, valued at \$3,296,496) were nearly 50 million pounds above the catch in 1880, the highest catch previously recorded. Menhaden accounted for 74 percent of the volume of the catch, but for only 14 percent of the total value. The most valuable items taken were oysters, which accounted for 23 percent of the value, and clams 16 percent. Oysters and clams each accounted for 3 percent of the volume of the Middle Atlantic catch.

Shortages of cold-storage space, refrigerator cars, rope, fishing gear, replacement parts for engines, and similar difficulties plagued the Middle Atlantic fishing industry. However, these shortages were not as severe as they had been earlier in the War. Demand for all fishery products continued strong, and provided an extra incentive for the exercise of ingenuity in overcoming all of these difficulties. Price ceilings remained in effect on most fishery commodities during the year, and caused some dissatisfaction among fishermen and dealers, and resulted in some changes in traditional methods of operation.

With the liberalization of draft deferments and the return of men from the armed services, the manpower situation eased somewhat but available manpower in this region was still short of filling requirements.

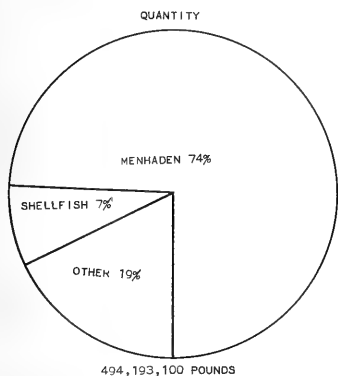

In 1945, the fisheries of the coastal area of New York, New Jersey, and Delaware employed 10,848 fishermen, compared with 7,682 in 1944. The number of vessels and boats increased from 3,352 in 1944 to 5,867 in 1945.

The last complete survey of the fishery transporting, wholesaling, and manufacturing industries was made for 1940. In that year, 215 men were employed in the operation of 72 vessels and boats engaged in the transporting trade and 5,880 persons were employed in wholesale and manufacturing establishments. The latter employees received \$6,736,554 in salaries and wages during 1940. Detailed statistics on these branches of the industry for that year can be found in Fishery Statistics of the United States, 1944 (Statistical Digest No. 16).

Condensed summary data on the operating units and catch by states of the Middle Atlantic fisheries have been previously published in Current Fisheries Statistics No. 422.

<sup>4</sup> This number was assigned to this area by the North American Council on Fishery Investigations. It should be explained that there are included in this area craft whose principal fishing ports are in the area but at times fish elsewhere. A notable example is the southern trawl fishery which extends into Area XXIV.

## MIDDLE ATLANTIC CATCH, 1929 - 1945

# HUDSON RIVER SHAD FISHERY <sup>5</sup>

165

The shad fishery of the Hudson River in 1945 gave employment to 545 fishermen, who took 3,477,200 pounds of shad valued at \$504,123 to the fishermen. This represents a decrease of 9 percent in weight, but an increase of 124 percent in value, compared with 1944. The average price per pound received by fishermen in 1945 was 14.5 cents compared with 5.9 cents in 1944.

Stake gill nets and stake stop nets, which are essentially similar in basic principle, accounted for 68 percent of the production by weight; drift gill nets, 31 percent; haul seines, the remaining 1 percent.

Statistics of the catch of shad in the Hudson River also are included in the catch data for New York and New Jersey.

<sup>5</sup> The reader is referred to Section 11 of this document for an account of the years for which surveys of this fishery have been made.

## HUDSON RIVER SHAD CATCH, 1915 - 1945

# LANDINGS AT NEW YORK CITY

167

Landings of fishery products at New York City during 1945 by fishing craft of all sizes totaled 16,596,371 pounds, landed weight. This was 13 percent below the 1944 landings.

Ninety-five percent of the New York City landings consisted of fish, and five percent of shellfish. In the previous year shellfish accounted for only one percent of the volume of the landings. The increase in the importance of shellfish was primarily due to the quadrupling of the sea scallop landings and the doubling of the squid catch. The most important species of fish landed were haddock, fluke, scup, sea bass, and lemon sole.

Information on the 1945 landings at New York City is also available in Current Fishery Statistics No. 269.

# SECTION 4.- CHESAPEAKE FISHERIES

(AREA XXIII) <sup>6</sup>

The 1945 commercial catch of fishery products in the Chesapeake States (Virginia and Maryland) amounted to 304,463,200 pounds, valued at \$30,363,244 to the fishermen. This represents an increase of 14 percent in quantity and 53 percent in value compared with the previous year. The increase in poundage occurred almost entirely in the Virginia production, with only a nominal increase reported for Maryland. The largest increases were listed for croaker, menhaden, and gray sea trout. The 1945 catch was the most valuable in the history of the fishery.

The year was marked by the continued strong demand for fishery products, due in part to the short supply and continued rationing of meat products. Most fishery products remained under price control throughout the year, although a few items, including frozen and canned crab meat, were exempted from controls in October.

Shortages of material, particularly rope and fishing gear, hampered production during 1945. In spite of the general easing of the manpower situation in the country as a whole, the shortage of help continued acute in the Chesapeake region. The menhaden season in Virginia closed 4 to 6 weeks earlier than usual because of the lack of workers. Wages in other plants were higher, and employees left before the end of the season. Menhaden were reported to be plentiful, but without manpower to operate the plants it was necessary to discontinue fishing. Two of the seven menhaden plants did not operate during 1945. The oyster industry also complained of an acute shortage of oyster shuckers, while the scarcity of crab pickers caused dealers to limit the daily catches of crabs. Despite these difficulties, the number of fishermen in the two states increased from 14,849 in 1944 to 17,673 in 1945. The increase in fishermen can probably be attributed to the increased prices paid fishermen. The number of boats and vessels used for fishing also increased over the previous year.

The last complete survey of the fishery transporting, wholesaling, and manufacturing industries was for 1940. In that year, 1,023 men were employed in the operation of 544 vessels engaged in the transporting trade and 12,331 persons were employed in wholesale and manufacturing establishments. The latter employees received \$3,552,827 in salaries and wages during 1940. Detailed statistics on these branches of the industry for 1940. can be found in "Fishery Statistics of the United States, 1944" (Statistical Digest No. 16).

Condensed summary data on the operating units and catch by states of the Chesapeake fisheries have been previously published in Current Fishery Statistics No. 417.

*6 This number has been assigned to this area by the North American Council of Fishery Investigations. It should be explained that there may be included under this area, craft whose principal fishing ports are in this area but at times fish elsewhere. Data on the operating units and catch of the fisheries of Maryland have been taken largely from statistics collected by the Maryland Department of Tidewater Fisheries. A portion of the data on the fisheries of Virginia have likewise been obtained from the Virginia Commission of Fisheries. Supplementary surveys, compilations, and analyses, have been made by agents of this Service in order that the figures may be presented in a manner comparable with those of other sections.*

## POTOMAC RIVER SHAD AND ALEWIFE FISHERY

The catch of shad in the Potomac River in 1945 amounted to 165,559 fish, weighing 537,700 pounds, and valued at \$93,704 to the fishermen. The catch of alewives in the Potomac for the same year was 8,723,600 fish, weighing 4,361,800 pounds, and valued at \$110,192. Compared with 1944, the catch of shad shows a decrease of 39 percent in weight and 8 percent in value, while alewives registered a decrease of 26 percent in weight and 7 percent in value.

A total of 649 fishermen were employed in this fishery during 1945, 200 more than during the previous year.

Statistics on the yield of shad and alewives in the Potomac River are also included in the catch data for Maryland and Virginia.

## SECTION 5.- SOUTH ATLANTIC AND GULF FISHERIES

*(South Atlantic, Area XXIV; Gulf, Area XXV) 7*

During 1945, the catch of fishery products in the South Atlantic and Gulf States (North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana, and Texas) totaled 746,026,900 pounds, valued at \$54,330,033 to the fishermen. Record landings of menhaden, crab, and shrimp, and near-record landings of several other varieties boosted the total nearly 120 million pounds above the next highest year for which records are available. It was also the most valuable catch recorded for this section. The 1945 production registered an increase of 30 percent in volume and 271 percent in value compared with 1940, when the last previous survey was made of this area.

In common with other sections of the country, the South Atlantic and Gulf fisheries enjoyed a record demand for their products throughout the year. This was particularly true of the shrimp industry, which had a seemingly unlimited demand for its products. Fortunately, this industry was able to go a long way toward supplying this huge demand, as a program of vessel and plant modernization had increased efficiency so that production could be increased in spite of a severe manpower shortage. Ceiling prices were suspended on canned oysters and fresh-frozen and canned crab meat in October. Since this was after the season had ended, it had little effect on the 1945 production. It did, however, encourage planning for the 1946 season.

Production of oysters in Mississippi was retarded, as a labor dispute tied up the industry all during the month of January, which is normally one of the best months for oyster-  
ing. The September hurricane severely damaged shore installations and vessels in Texas, and undoubtedly cut the shrimp landings in that state severely.

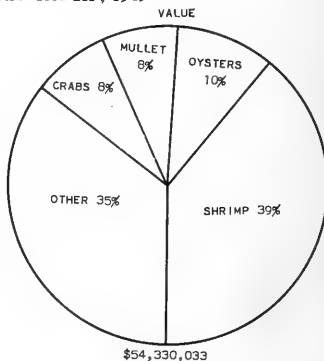

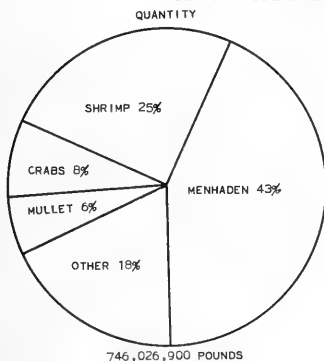

During the spring, a severe flood on the Mississippi River necessitated the opening of the Bonet Caret spillway above New Orleans releasing tremendous quantities of fresh water and silt into Mississippi Sound. This apparently caused the destruction of large oyster reefs and restricted the catch of oysters during the fall season. The results of this will be much more apparent during the following year, as the most intensive fishery in this area is during the spring season.

The last complete survey of the fishery transporting, wholesaling, and manufacturing industries was made in 1940. In that year, 677 men were employed in the operation of 333 vessels and boats engaged in the transporting trade and 18,926 persons were employed in wholesale and manufacturing establishments. The latter employees received a total of \$3,814,342 in salaries and wages in 1940. Detailed statistics on these branches of the industry for 1940 can be found in "Fishery Statistics of the United States, 1944" (Statistical Digest No. 16).

Condensed summary data on the operating units and catch by states of the South Atlantic and Gulf fisheries have been previously published in Current Fishery Statistics, No. 378.

<sup>7</sup> These numbers were assigned to these areas by the North Atlantic Council on Fishery Investigations. While the catch of fishery products in Lake Okeechobee is included in the Florida catch tables, the catch of the Mississippi River and tributaries does not appear in this section.

1/ DATA ON THE OPERATING UNITS OF FLORIDA WERE NOT COLLECTED DURING THE 1945 CANNAVS OF THE SOUTH ATLANTIC AND GULF STATES. FOR THAT REASON THE 1940 DATA HAVE BEEN INSERTED IN THIS TABLE SINCE THEY REPRESENT THE LATEST AVAILABLE INFORMATION ON THE OPERATING UNITS OF FLORIDA. IT IS ESTIMATED HOWEVER, THAT APPROXIMATELY 11,000 FISHERMEN, OPERATING ABOUT 240 VESSELS AND 6,500 UNDERTONNAGE CRAFT, ENGAGED IN THE 1945 FLORIDA COMMERCIAL FISHERY.

## SECTION 6.- PACIFIC COAST FISHERIES<sup>8</sup>

The commercial catch of fishery products in the coastal areas of the Pacific Coast States during 1945 amounted to 1,428,278,400 pounds, valued at \$62,694,299 to the fishermen. This was a decline of 15 percent in volume, but an increase of 3 percent in value, compared with the previous year. Reduced catches of pilchard and mackerel in California and grayfish in Washington accounted for the major portion of the decline. The landings of pilchard were the smallest since 1933, while those of mackerel were the second smallest since 1932. The reduced yields of these species were partly offset by good catches of salmon and tuna. Production of salmon was the highest since 1935, while the catch of tuna was the second largest in the history of the fishery. Although the 1945 catch was nearly a half billion pounds below the record 1936 production, the value to the fishermen was over 2½ times the 1936 value.

The Office of the Coordinator of Fisheries continued to administer the California pilchard fishery and to control the allocation of halibut landings. The halibut season opened May 1 with a quota of 52,500,000 pounds dressed weight, an increase of 1,500,000 pounds from the 1944 figure. The Office of the Coordinator of Fisheries also continued the Puget Sound Salmon Concentration Plan, allowing 4 plants to cooperate with a fifth plant on a standby basis for use if the necessity arose. Spurred by the heavy demand for fillets, the other trawl fishery discovered new fishing grounds and so were able to increase production. The increase in tuna landings was primarily due to the return of vessels from the armed services and to the addition of a number of new vessels to the fleet.

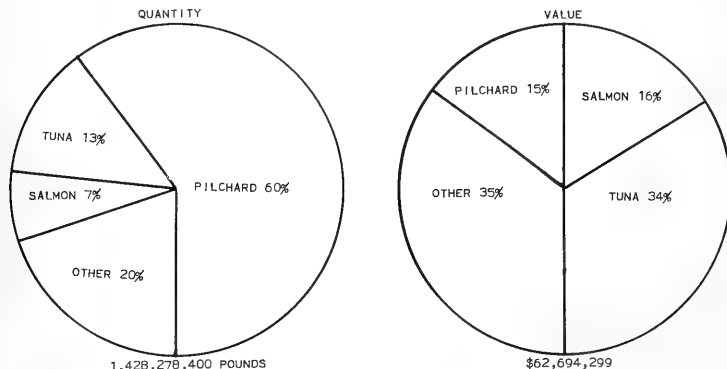

The number of fishermen in these states increased from 25,125 in 1944 to 34,028 in 1945, with a corresponding increase in the number of vessels and boats. In 1939 and 1940, the number of fishermen averaged slightly more than 25,000.

The last complete survey of the fishery transporting, wholesaling and manufacturing industries was made for 1940. In that year, 141 men were employed on 58 vessels operating in the transporting trade and 19,109 persons were employed in wholesale and manufacturing establishments. The latter employees received \$11,440,359 in salaries and wages during 1940. Detailed statistics on these branches of the industry for 1940 can be found in "Fishery Statistics of the United States, 1944" (Statistical Digest No. 16).

Condensed summary data on the catch by states of the Pacific Coast fisheries have been previously published in Current Fishery Statistics No. 385.

<sup>8</sup> Data on the operating units and catch of the fisheries of the Pacific Coast States have been taken largely from statistics collected by the various State agencies. Supplementary surveys, compilations, and analyses, have been made by agents of this Service in order that the figures may be presented in a manner comparable with those of other sections. While statistics on the fisheries of California are for the calendar year, those for Oregon and Washington are for the fiscal year ending March 31, 1944, except that statistics of the halibut fishery for Washington are for the calendar year.

NOTE:--PRIOR TO 1941, THE POUNDAGE OF HALIBUT, SABLEFISH, LINGCOD, AND ROCKFISHES REPORTED FOR WASHINGTON AND OREGON REPRESENTED THE DRESSED WEIGHT OF THE FISH LANDED. BEGINNING WITH THE DATA FOR 1941, ALL CATCH STATISTICS ARE SHOWN IN ROUND WEIGHTS. THE LANDED WEIGHT OF LINGCOD, SABLEFISH, AND ROCKFISHES (EXCEPT IN THE OTHER TRAWL FISHERIES IN WHICH THE FISH ARE LANDED ROUND) WAS CONVERTED TO ROUND WEIGHT BY MULTIPLYING THE DRESSED WEIGHT BY THE FACTOR 1.43. THE FACTOR USED TO CONVERT HALIBUT FROM MARKETED WEIGHT WAS 1.33. THE POUNDAGE AND VALUE OF THE CATCH SHOWN FOR WASHINGTON AND OREGON INCLUDE 4,941,374 POUNDS OF FISH LIVERS AND VISCERA, VALUED AT \$4,043,252 TO THE FISHERMEN. COMPRISING THIS TOTAL WERE: COD LIVERS, 189,990 POUNDS, \$9,594; GRAYFISH LIVERS, 3,071,415 POUNDS, \$1,233,753; HALIBUT LIVERS, 236,105 POUNDS, \$394,680; LINGCOD LIVERS, 338,357 POUNDS, \$679,527; ROCKFISH LIVERS, 34,680 POUNDS, \$17,340; SABLEFISH LIVERS, 73,071 POUNDS, \$90,991; SOUPFIN SHARK LIVERS, 237,613 POUNDS, \$1,443,555; OTHER SHARK LIVERS, 10,948 POUNDS, \$547; RATFISH LIVERS, 254,214 POUNDS, \$8,897; SKATE LIVERS, 2,997 POUNDS, \$75; AND HALIBUT, LINGCOD, AND SABLEFISH VISCERA, 491,984 POUNDS, \$164,293. SIMILAR DATA FOR CALIFORNIA ARE NOT AVAILABLE. MOST OF THE CARCASSES OF DOGFISH AND SOUPFIN SHARK WERE NOT LANDED, BUT WERE DISCARDED AT SEA AFTER REMOVAL OF THE LIVERS.

- 1/ THE SALMON CAUGHT BY HAUL SEINES WERE TAKEN BY INDIANS ON THEIR RESERVATIONS.  
 2/ FISHED ONLY ON INDIAN RESERVATIONS.  
 3/ CAUGHT ALMOST ENTIRELY FOR THE UTILIZATION OF THE LIVERS IN THE EXTRACTION OF VITAMIN OILS. MOST OF THE CARCASSES WERE DISCARDED.  
 4/ STATISTICS ON THE CATCH OF SALMON ARE REPORTED TO THE STATE IN NUMBER OF FISH RATHER THAN IN POUNDS. THE FACTORS USED IN THE ABOVE TABLE FOR CONVERTING NUMBER OF FISH TO WEIGHT IN POUNDS WERE AS FOLLOWS: CHINOOK OF KING, 20.3 POUNDS; CHUM OR KETA, 10.0 POUNDS; PINK, 5.75 POUNDS; RED OR SOCKEYE, 6.3 POUNDS; AND SILVER OR COHO, 9.7 POUNDS.  
 5/ THE STEELHEAD TROUT WERE CAUGHT BY INDIANS ON THEIR RESERVATIONS.  
 6/ THE WEIGHT OF CRABS SHOWN IS BASED ON AN AVERAGE OF 22 POUNDS PER DOZEN.  
 7/ THE STATISTICS ON HARD CLAMS ARE BASED ON YIELDS OF 25 PERCENT OF EDIBLE MEAT.  
 8/ THE STATISTICS ON OYSTERS ARE BASED ON 18 PERCENT EDIBLE MEATS FOR NATIVE OYSTERS AND 10 PERCENT FOR PACIFIC OYSTERS.  
 9/ THE WEIGHT OF BAY SCALLOPS IS BASED ON 8.5 POUNDS PER GALLON WHEN SHUCKED.

NOTE:--PRIOR TO 1941 THE POUNDAGE OF HALIBUT, SABLEFISH, LINGCOD, AND ROCKFISHES REPORTED FOR THE PUGET SOUND DISTRICT OF WASHINGTON REPRESENTED THE DRESSED WEIGHT OF THE FISH LANDED. BEGINNING WITH THE DATA FOR 1941 ALL CATCH STATISTICS ARE SHOWN IN ROUND WEIGHTS. ## COLUMBIA RIVER DISTRICT : CATCH BY GEAR, 1945 - Continued

- 1/ THE FOLLOWING WERE TAKEN OFF THE OREGON AND WASHINGTON COASTS BUT LANDED IN THE COLUMBIA RIVER DISTRICT: TRUE COD, SOLE, GRAYFISH, HALIBUT, PILCHARD, ROCKFISHES, SABLEFISH, SHARK, SKATE, TUNA, CRABS AND SOME OF THE STURGEON. MOST OF THE FLOUNDERERS, LINGCOD AND TROLL CAUGHT SALMON ALSO WERE TAKEN IN COASTAL WATERS.
- 2/ CAUGHT ALMOST ENTIRELY FOR THE UTILIZATION OF THE LIVERS IN THE EXTRACTION OF VITAMIN OILS. MOST OF THE CARCASSES WERE DISCARDED.
- 3/ THE WEIGHT OF CRABS IS BASED ON AN AVERAGE OF 24 POUNDS PER DOZEN.

NOTE:--PRIOR TO 1941 THE POUNDAGE OF HALIBUT, SABLEFISH, LINGCOD AND ROCKFISHES REPORTED FOR THE COLUMBIA RIVER DISTRICT OF OREGON REPRESENTED THE DRESSED WEIGHT OF THE FISH LANDED. BEGINNING WITH THE DATA FOR 1941 ALL CATCH STATISTICS ARE SHOWN IN ROUND WEIGHTS. THE POUNDAGE AND VALUE OF THE CATCH SHOWN ABOVE INCLUDES THE FOLLOWING ITEMS OF LIVERS AND VISCERA: COD LIVERS, 3,142 POUNDS, VALUE \$251; GRAYFISH LIVERS, 232,919 POUNDS, VALUE \$99,897; HALIBUT LIVERS, 5,303 POUNDS, VALUE \$5,303; LINGCOD LIVERS, 28,578 POUNDS, VALUE \$57,156; ROCKFISH LIVERS, 3,000 POUNDS, VALUE \$1,500; SABLEFISH LIVERS, 8,269 POUNDS, VALUE \$5,623; SOUPFIN SHARK LIVERS, 33,528 POUNDS, VALUE \$185,075; BLUE SHARK LIVERS, 8,562 POUNDS, VALUE \$428; HALIBUT AND SABLEFISH VISCERA, 17,132 POUNDS, VALUE \$4,263.

1/ CAUGHT ALMOST ENTIRELY FOR THE UTILIZATION OF THE LIVERS IN THE EXTRACTION OF VITAMIN OILS. MOST OF THE CARCASSES WERE DISCARDED.

2/ THE WEIGHT OF CRABS IS BASED ON AN AVERAGE OF 24 POUNDS PER DOZEN.

3/ THE WEIGHT OF RAZOR CLAMS IS THAT OF EDIBLE MEATS BASED ON A YIELD OF 42 PERCENT OF THE ROUND WEIGHT.

4/ MIXED CLAMS CONSIST PRINCIPALLY OF EASTERN SOFT-SHELL CLAMS. THE WEIGHT SHOWN IS THAT OF EDIBLE MEATS, BASED ON A YIELD OF 21 PERCENT OF THE ROUND WEIGHT.

5/ THE STATISTICS ON OYSTERS USED IN THIS TABLE ARE BASED ON A YIELD OF 12 PERCENT OF EDIBLE MEATS.

NOTE:--PRIOR TO 1941 THE POUNDAGE OF HALIBUT, SABLEFISH, LINGCOD AND ROCKFISHES REPORTED FOR THE COASTAL DISTRICT OF OREGON REPRESENTED THE DRESSED WEIGHT OF THE FISH LANDED. BEGINNING WITH THE DATA FOR 1941, ALL CATCH STATISTICS ARE SHOWN IN ROUND WEIGHTS. THE POUNDAGE AND VALUE OF THE CATCH SHOWN ABOVE INCLUDES THE FOLLOWING ITEMS OF LIVERS AND VISCERA: GRAYFISH LIVERS, 34,083 POUNDS, VALUE \$14,656; HALIBUT LIVERS, 3,282 POUNDS, VALUE \$2,593; LINGCOD LIVERS, 14,061 POUNDS, VALUE \$27,700; ROCKFISH LIVERS, 3,500 POUNDS, VALUE \$1,750; SABLEFISH LIVERS, 8,460 POUNDS, VALUE \$6,345; SOUFFIN SHARK LIVERS, 34,944 POUNDS, VALUE \$192,891; BLUE SHARK LIVERS, 2,385 POUNDS, VALUE \$119; HALIBUT AND SABLEFISH VISCERA, 13,946, VALUE \$3,486.

## LANDINGS BY HALIBUT FLEET AT SEATTLE, WASH.

Landings of halibut, lingcod, rockfishes, and sablefish at Seattle, Washington, by the United States halibut fleet during 1945 amounted to 13,676,821 pounds, valued at \$2,185,062 to the fishermen. In addition, a total of 1,384,538 pounds of assorted fish livers and viscera, valued at \$1,803,538, was also landed by these vessels. The combined landings were nearly identical with those in 1944, but the value declined 14 percent. The bulk of the landings occurred during May, June, and July.

All landings reported in the following tables are reported as dressed weight, and so are not directly comparable with data contained in the sectional and state catch tables which list production in round weight.

A summary of the 1945 landings at Seattle by the United States halibut fleet is contained on the following page. For additional information on the Pacific Coast halibut fishery the reader is referred to Section 10 of this document, entitled "Review of Certain Major Fisheries."

## FISHERY PRODUCTS RECEIVED BY SEATTLE WHOLESALE DEALERS

In former years, Seattle receipts were listed exclusive of fish livers, and shipments received from Alaska and British Columbia. In 1945, these receipts are included. However, the point of origin is shown so they can be deducted for comparative purposes. The Seattle Market News Service office issues detailed information on these receipts monthly.

SECTION 7.- LAKE FISHERIES <sup>9</sup>

During 1945, the commercial catch of fish by United States fishermen in the Great Lakes and the International Lakes of Northern Minnesota amounted to 78,642,600 pounds, valued at \$13,800,147 to the fishermen, an increase of 4 percent in volume and 26 percent in value compared with the previous year. In addition, the Canadian catch in these lakes amounted to 30,050,700 pounds. Lake Erie was the leading producer, with United States fishermen taking 28,630,900 pounds and Canadian fishermen 18,949,100 pounds. Of the individual states, Michigan had the largest production with 23,960,200 pounds.

The leading specie in the United States catch was lake herring, 19,525,100 pounds, followed by lake trout, 8,979,500 pounds, blue pike, 7,849,400 pounds, yellow pike, 6,603,900 pounds, and carp, 6,459,800 pounds. The catch of lake herring was the largest since 1941, although still well below the 1936-1940 average. The yield of blue pike, which has been very erratic, from year to year, was only 52 percent as great as in 1944, while that of yellow pike was the second largest on record. The catch of lake trout was the smallest since 1913 when records first became available.

The most recent data available on operating units employed in the fisheries of the Lake States is for 1940. In that year, 5,142 United States fishermen were employed. If the Lake fisheries had followed the same trend as in other areas it can be assumed that the number of fishermen in 1945 was somewhat greater than in 1940.

The last complete survey of the fishery transporting, wholesaling, and manufacturing industries was made for 1940. In that year, 33 men were employed on 11 vessels operating in the transporting trade and 3,030 persons were employed in wholesale and manufacturing establishments. The latter employees received \$2,842,680 in salaries and wages in 1940. Detailed statistics on these branches of the industry for 1940 can be found in "Fishery Statistics of the United States, 1944" (Statistical Digest No. 16), and in earlier publications of the same series.

Condensed summary data on the catch by states of the Lake fisheries have been previously published in Current Fishery Statistics No. 351. Historical data on the fisheries of the Great Lakes can be found in the Report of the International Board of Inquiry for the Great Lakes, which can be purchased from the Superintendent of Documents, Washington 25, D. C.

<sup>9</sup> The statistics of the catch were obtained principally from records of the various State agencies and from the Dominion Bureau of Statistics, Ottawa, Canada. The data for the operating units (fishermen, vessels, boats, and gear) of the United States, which are for 1940, were obtained largely by agents of this Service in a special survey, although State records in several instances were very helpful in this work. In all cases, the statistics collected are for the calendar year except for Rainy Lake, Lake of the Woods, and Namakan Lake in Minnesota, which are for two seasons; for Lake of the Woods, the seasons are from June 1 to November 1 and December 1 to April 1; and for Rainy and Namakan Lakes the seasons are from May 15 to November 1 and December 1 to April 1. The catches for these two seasons, in the order named, have been combined to constitute a year. The quantity of fish taken in these Lakes between January 1 and April 1 is estimated to be less than 3 percent of the total catch.

The most recent catch statistics of the fisheries of the Mississippi River and its Tributaries are those collected for the year 1931. The yield of fishery products in that year amounted to 82,382,523 pounds, valued at \$2,897,357, which was a decrease of 22 percent in quantity and 36 percent in value compared with the quantity and value of the catch in 1922, when the preceding survey was made.

Detailed statistics on the fisheries of the Mississippi River and its Tributaries were published in Appendix III to Report of Commissioner of Fisheries for the fiscal year 1933 entitled "Fishery Industries of the United States, 1932".

A summary of these fisheries in 1931 was published in the Bureau of Fisheries annual reports entitled "Fishery Industries of the United States," by R. H. Fiedler, for the years 1933 to 1939, inclusive and in Statistical Bulletin 994. Information regarding the production of cured fishery products in the Mississippi River area in 1931, mussel-shell buttons in 1945, and other mussel shell products in 1944 appear in the following table.

6/ INCLUDES SMOKED BUFFALOFISH, BUTTERFISH, CARP, LAKE TROUT, PADDFLESH, SABLEFISH, SALMON, TULLIBEEES, AND WHITEFISH.

NOTE:--THE TOTAL VALUE OF THE MANUFACTURED PRODUCTS FOR THE MISSISSIPPI RIVER AND ITS TRIBUTARIES WAS AS FOLLOWS: BY MANUFACTURING ESTABLISHMENTS, \$4,658,759; AND BY FISHERMEN, \$8,751. SOME OF THE PRODUCTS MAY HAVE BEEN MANUFACTURED FROM PRODUCTS IMPORTED FROM ANOTHER STATE OR A FOREIGN COUNTRY; THEREFORE, THEY CANNOT BE CORRELATED DIRECTLY WITH THE CATCH FROM WITHIN THE STATE.

SECTION 9.- ALASKA FISHERIES<sup>10</sup>

The commercial catch of fishery products in Alaska during 1945 totaled 596,051,660 pounds, valued at \$22,288,148 to the fishermen. This represented an increase of 6 percent in volume and 9 percent in value compared with 1944 and was the largest yield since 1941. The increase was primarily due to a rise of 23 percent in the landings of herring and of 2 percent in the catch of salmon.

The production in Western Alaska registered a sharp decrease, primarily due to 1945 being a low cycle year for red salmon in Bristol Bay. However, this decline was more than offset by increases in salmon landings in Central Alaska and herring in Central and Southeastern Alaska.

The herring catch quotas were raised from 575,000 barrels in 1944 to 700,000 barrels in 1945. A barrel consists of 250 pounds of herring.

Salmon canning was conducted in compliance with an industry concentration program which designated which plants could operate and which would remain idle. The purpose of the program was to obtain an adequate supply of canned salmon with the limited man-power, materials, and shipping facilities available. The 1945 program was more liberal than that of the preceding years as it authorized the operation of 96 canneries, compared with 93 in 1944 and 83 in 1943.

Canned salmon again was subject to "set-aside orders" requiring that Government requirements be filled before civilian orders. However, the percentage required to be held for Governmental purchase was much less than in 1944. As in the previous year, all halibut landed at United States ports were allocated among dealers by the Office of the Coordinator of Fisheries to assure the orderly distribution of the catch. An important change in this procedure in 1945 provided allocations to the various dealers on the basis of their purchases in previous years along the entire coast rather than upon the basis of such purchases at each port.

There was a large increase in the production of fresh and frozen salmon in Alaska during 1945. An even more spectacular increase was noted in the pack of cured salmon, with pickled salmon increasing 580 percent and mild-cured salmon 87 percent compared with 1944.

Condensed summary data on the operating units, catch, and products prepared for market have been previously published in Current Fishery Statistics No. 331. Additional information of the fisheries of Alaska during 1945 can be found in "Alaska Fishery and Fur-Seal Industries, 1945" (Statistical Digest No. 15)

<sup>10</sup> Statistics on the fisheries of Alaska are collected and compiled by the Alaska Division of this Service.

NOTE:--PRIOR TO 1943 THE CATCH OF COD TAKEN BY PUGET SOUND AND CALIFORNIA COD SCHOONERS OPERATING IN BERING SEA WAS CREDITED TO THE PUGET SOUND AND SAN FRANCISCO DISTRICTS RESPECTIVELY. NONE OF THESE CRAFT OPERATED IN 1943. BEGINNING WITH DATA FOR 1944 THE CATCH OF COD TAKEN BY THESE SCHOONERS HAS BEEN CREDITED TO THE WESTERN DISTRICT OF ALASKA.

PRIOR TO 1943 THE ENTIRE CATCH OF HALIBUT, SABLEFISH, LINGCOD, AND ROCKFISHES TAKEN BY UNITED STATES VESSELS IN THE HALIBUT FLEET WHICH LANDED FIFTY PERCENT OR MORE OF THEIR CATCH AT ALASKAN PORTS AND PRINCE RUPERT WAS CREDITED TO ALASKA, EVEN THOUGH A PORTION OF THE CATCH WAS LANDED AT SEATTLE. SIMILARLY THE CATCH CREDITED TO THE PUGET SOUND DISTRICT OF WASHINGTON INCLUDED THE ENTIRE CATCH BY HALIBUT VESSELS WHICH LANDED MORE THAN FIFTY PERCENT OF THEIR CATCH AT SEATTLE EVEN THOUGH A PORTION OF THE FISH TAKEN WERE LANDED AT ALASKAN PORTS AND PRINCE RUPERT. BEGINNING WITH DATA FOR 1943 THE ENTIRE CATCH LANDED BY HALIBUT VESSELS AT ALASKAN PORTS AND PRINCE RUPERT HAS BEEN CREDITED TO ALASKA.

## SECTION 10.- REVIEW OF CERTAIN MAJOR FISHERIES

There is presented in this section of the Digest complete data on the catch of certain of the major species of fish and shellfish taken commercially in the United States and Alaska. Although these data are included in the detailed catch tables for the various States they have been republished in individual fishery tables in this portion of the report to provide readers with a single source of catch data for cod, haddock, halibut, mackerel, menhaden, pilchard, rosefish, tuna, oyster, and shrimp. Most of these species are taken by fishermen operating in several States or districts, and a number are taken by several types of fishing gear. Because of this, the casual reader of the Digest often experiences difficulty in locating complete data on the catch of the species. The information contained in this section includes the volume and value of the catch by individual types of gear, and by States or districts.

*United States and Alaska Cod Fishery.*—Production of cod in the United States and Alaska which amounted to 153,027,079 pounds in 1945 was 52 percent greater than in 1944. Large increases occurred in the important New England and Pacific States, and gains likewise were reported in other sections where cod are taken.

*Atlantic Coast Haddock Fishery.*—The 1945 catch of haddock, which amounted to 154,986,600 pounds was 10 percent greater than the preceding year's production. As usual, the bulk of the catch was taken by otter trawls in New England. Haddock were also landed in the Middle Atlantic States by otter trawls, and small quantities were taken in New England waters with trawl and hand lines and gill nets.

*Pacific Coast Halibut Fishery.*—The Pacific Coast halibut fishery is relatively stable in its yield, due to the quotas placed on the total catch by the International Fisheries Commission. The data listed in the tables on this fishery represent dressed weight, which is the weight upon which the quota is based, while those in the various State and sectional tables represent round weight.

*Atlantic Coast Mackerel Fishery.*—The 1945 Atlantic Coast mackerel catch of 58,672,300 pounds was 21 percent below the 1944 production. The bulk of the landings were taken by purse seines in New England, although numerous other types of gear were also used. Small quantities were likewise landed in the Middle Atlantic and Chesapeake States.

*Pacific Coast Mackerel Fishery.*—The 1945 catch amounting to 53,716,700 pounds was 36 percent below the 1944 production. Landings were confined to the State of California, with most of the production reported from the San Pedro district.

*Atlantic Coast Menhaden Fishery.*—The menhaden production of over 778 million pounds was the largest recorded. The Middle Atlantic States had the largest production, closely followed by the South Atlantic and Gulf States.

*Pacific Coast Pilchard Fishery.*—The catch of pilchards, which amounted to 849,971,000 pounds in 1945, was the smallest since 1933. Small catches by the normally important San Francisco and Monterey fisheries were responsible for the major portion of the decline.

*Rosefish Fishery.*—Rosefish production of nearly 132 million pounds set a new record for this fishery. Landings of this specie is restricted to Maine and Massachusetts and nearly the entire catch is taken by otter trawls.

*Pacific Coast Salmon Fishery.*—The 1945 salmon fishery yielded a catch of 500,976,345 pounds, 13 percent greater than in 1944. Purse seines took the largest quantity, followed by pound nets (traps) and gill nets.

*Pacific Coast Tuna Fishery.*—The catch of tuna, 183,587,500 pounds, was the second largest in the history of the fishery. Yellowfin was the dominant specie, followed by albacore, skipjack and bluefin.

*United States and Alaska Shrimp Fishery.*—The shrimp catch in 1945 was the largest ever reported and was no doubt the greatest in history. The catch amounted to 191,296,391 pounds, valued at \$21,365,409, compared with landings of 152,663,000 pounds valued at \$5,954,000 in 1940, the last year for which complete data are available.

*United States and Alaska Oyster Fishery.*—Oyster production during 1945 totaled over 75 million pounds of meats, valued at over 25 million dollars. Comparable data covering the entire country are not available for the years 1941 to 1944 inclusive. In 1940 when the last complete survey was made the catch amounted to 89,384,000 pounds, valued at \$8,467,000.

## SECTION 11.- STATISTICAL SURVEY PROCEDURE

This report is another in a series of annual statistical reports containing data on the quantity and value of the commercial catch of fishery products and the numbers of persons and operating units engaged in the commercial fisheries of the United States and Alaska. The report has been prepared and published by the Branch of Commercial Fisheries, Fish and Wildlife Service, Department of the Interior, and is a continuation of a series inaugurated by its predecessor organizations in the Departments of the Interior, Commerce, and Labor, and the United States Fish Commission.

In order that those who use the statistical data contained in this and previous reports may be informed as to the source of the figures and methods for their collection, it has been deemed advisable to outline, in moderate detail, the survey procedure followed. This procedure has been developed over a period of years, and changes in method have been made at times when such changes have appeared to work toward general improvement. While the surveys in the several sections are not made in the same manner, owing to varying facilities and records in different States, an attempt has been made to make the data collected by various methods in the producing areas comparable with respect to the same year as well as over a period of years. Throughout the entire plan it has been the intention to coordinate State and Federal fishery statistical work so that there will be as little duplication of effort as possible.

### SECTIONAL SURVEYS

Statistical surveys of the fisheries and fishery industries of the various sections of the United States occupy by far the greatest part of the time of the statistical personnel of the Branch. In the course of these surveys, the field representatives visit the individual fishing localities of the various States to collect statistics on the volume and value of the catch of fish and shellfish, employment in the fisheries, quantity of fishing gear, number and classification of fishing and transporting craft, and the volume and value of manufactured fishery products and byproducts. The various phases of these surveys are discussed in detail in the sections following.

*History.*—The first comprehensive statistical survey of the fisheries and fishery industries of the United States was made for the year 1880 by George Brown Goode, Assistant Director of the United States National Museum, and associates, with the cooperation of the Commissioner of Fisheries and the Superintendent of the Tenth Census. Data for specific fisheries, or restricted sections for years prior to 1880, also were collected in the early survey and recorded in Mr. Goode's reports. The survey for 1880, however, did not include the Mississippi River and its tributaries. Periodic general surveys of a limited number of States or limited areas of the United States were made for various of the intervening years between 1880 and 1908 and from 1909 to 1928. In 1908 a survey of the entire United States, except the Mississippi River and its Tributaries, was made. The next general survey of the entire United States was not made until 1931, although complete data for all sections, excluding the Mississippi River and its Tributaries, were collected for 1929 and 1930. Complete data on the catch and operating units for these same sections were also collected for 1932. In the latter survey, however, lack of sufficient funds prohibited collection of data on wholesale and manufacturing operations except those data collected as a part of the canned fishery products and byproducts survey. Complete canvasses for the catch and operating units were made of the Pacific Coast States for the years 1933 to 1945, inclusive; the Chesapeake States for the years 1933 to 1942, inclusive, 1944 and 1945; the New England and Middle Atlantic States for 1933, 1935, for each year for 1937 to 1940, inclusive, and for 1942 to 1945, inclusive; and the South Atlantic, Gulf, and Lake States for 1934, and for the years 1936 to 1940 inclusive. Complete data on the catch of the Lake States also were collected for 1933, and 1935, and for the years 1941 to 1945, inclusive. Complete data, except for Florida operating units, were also collected for the South Atlantic and Gulf States for 1945. Data on the wholesale and manufacturing industries were collected in all of the surveys from the years 1932 to 1940, but were not collected for the years 1941 to 1945, inclusive. In these years the lack of personnel precluded collection of data on wholesale and manufacturing firms except those data collected as a part of the canned fishery products and byproducts surveys.

The following chart indicates the years for which surveys have been made in the various sections. Figures for more recent years are available from the Service in bulletin form, but data for the earlier years are available only in the Fish Commission and Bureau of Fisheries printed reports. These reports are available for reference in the Department of the Interior library and in many public libraries.

Information on surveys of special fisheries and limited areas can be found in Statistical Digest No. 16 (Fishery Statistics of the United States, 1944) and in earlier publications of the same series.

*Field Personnel.*—The statistics contained in this volume have been collected by a group of trained marketing specialists which comprises a part of the permanent staff of the Branch of Commercial Fisheries of this Service.

*Period Covered.*—These specialists are assigned permanent field stations, generally in the principal port within their field, and travel from that station in conducting their various surveys. They collect statistics of fishery operations for the year preceding that in which they are working; and since their field work occupies the greater part of the year, it is usually at least a year from the end of the calendar year for which they are collecting data until the figures are published. The data usually are collected and published on a calendar year basis, although for some States they are on a fiscal year basis. Prior to 1930, statistics on the catch of oysters in the Atlantic and Gulf States were collected for the oyster season; that is, from September to April, inclusive. Beginning with 1930 and continuing to the present time, they have been collected on the basis of the calendar year.

*Scope.*—The scope of the coastal statistical surveys include canvasses of the commercial fisheries of the oceans and bays and of the coastal rivers as far inland as commercial fishing is important. This usually coincides with the range of commercial fishing for anadromous species. Statistics of the fisheries of the Mississippi River cover canvasses of the fisheries of the Mississippi River proper as well as all of its tributaries wherein commercial fishing for either fish, crustaceans, or mollusks is prosecuted. Statistics of the fisheries of the Great Lakes cover canvasses of the fisheries prosecuted in the lakes proper, adjacent bays, the International Lakes of northern Minnesota, and rivers which sustain a commercial fishery having outlets into these waters. Statistics on the fisheries of Florida include the commercial fisheries prosecuted in Lake Okechobee. Surveys for statistics of the wholesale and manufacturing fishery industries cover such plants located in the coastal, river, and lake areas adjacent to the waters mentioned above.

*Methods of Collection.*—Several methods for the collection of fishery statistics are employed, each of which has been carefully studied to obtain the best results with the available personnel and funds. In most instances the field personnel obtain lists of the names of fishing vessels, names and numbers of motorboats, and names of owners of these craft from local custom officials. Also it usually is possible to obtain the names of licensed commercial fishermen and some statistics on the catch from State fishery agencies; from other State, county or city sources; or from private organizations.

With such preliminary records as are available for their guidance the field specialists visit each fishing community in their field unless these preliminary records are so complete that personal visits may be eliminated. If complete catch data are not available from central sources, wholesale dealers and manufacturers of fishery products are visited and data are obtained from them on their purchases of fishery products. While it is impossible for the few Service representatives available for this work to interview each fisherman in a given locality, the more important ones are visited, and a sufficient number of those of lesser importance are interviewed to obtain reliable information on their production, the number of fishing craft employed, the quantity of gear operated, and the number of persons employed as fishermen.

In the Great Lakes and Pacific Coast States such exceptional cooperation has been obtained in recent years from the State fishery agencies in the collection of statistics that only fragmentary surveys need be made by the Service specialists to obtain other necessary data. Also the State fishery agencies in Maine, New York, and Maryland more recently have developed very complete statistical systems which greatly facilitate the Service's surveys in these States.

As regards the fisheries of the Great Lakes and International Lakes of Northern Minnesota, the Service obtains most of the catch statistics and usually the value of the catch direct from the records of the State fishery agencies. To obtain data on the number of fishermen,

boats, vessels, and gear, the Service conducts such personal surveys among the fishermen as may be necessary to supplement the State records.

Service statistical personnel are stationed at Seattle, Wash., and San Pedro, Calif., who survey the fisheries of the Pacific Coast States. As a rule they obtain figures on the volume of the catch from the records of the State fishery departments. The value of the catch is derived from dealers' records. In Washington and Oregon, the offshore fisheries are surveyed separately by the Service to obtain data on the number of operating units. Statistics of the wholesale fishery industry for this section are obtained largely by personal interviews.

In the administration of the Alaska fisheries the Service obtains sworn statements concerning the activities of those prosecuting the fisheries in this area. These statements are compiled by the Alaska Branch of this Service and the summary data, by districts, are reproduced in this report.

Statistics on the volume of the catch of fish of the Great Lakes States usually are shown in weights as landed, which may be in the round or dressed condition. Statistics on the volume of the catch of fish taken in the remainder of the United States are shown in round weight.

The figures in the tables for shellfish represent the weight of the meats in the cases of univalve and bivalve mollusks and gastropods, and the round weight of crustaceans and such mollusks as squid and octopus.

*Shore and vessel fisheries.*—In general, statistics of the shore fisheries, as collected by the Services' representatives, include data on the number of casual and regular fishermen; number of motor and other fishing boats and accessory boats; type and quantity of gear used; and the volume, value, and method of capture of each species caught by boats (for our purpose craft of less than 5 net tons capacity are called "boats") for each locality or group of localities. This method is not followed in some sections where the availability of data collected by the States fishery agencies obviates the necessity of detailed locality surveys.

Statistics of the vessel fisheries include data on the number of the crew, rig of vessels, net tonnage, kind and quantity of gear used, accessory boats carried, and volume, value, and method of capture of each species. For our purpose craft of 5 net tons capacity or more are called "vessels". As in the shore fisheries, the availability of figures collected by State fishery agencies may eliminate the necessity of our agents collecting these data for individual vessels.

Statistics of the quantity of gear operated indicate the maximum number of units fished at any one time during the year. Gear carried in reserve for replacement is not enumerated.

All persons engaged in commercial fishing operations are included as fishermen. For our purpose these have been divided into "regular" and "casual" fishermen. Regular fishermen are defined as those who receive more than one-half of their annual income from fishing; whereas casual fishermen are those whose principal business is something other than fishing, and who receive less than one-half of their annual compensation from fishing.

The catch of fish and shellfish is credited to the port where it is landed and the craft making the catch is credited to the locality where it landed the greatest portion of its catch during the year. Prior to the survey for 1942 it was the practice of the Service to credit the entire catch of a vessel to the principal port of landing, regardless of the actual point of landing. This policy was discontinued, however, since it quite often resulted in inconsistencies by presenting catches of certain fish in areas to which they are not common inasmuch as fishing vessels frequently operate in areas far removed from their principal fishing port. An outstanding example of this is the case of the Southern trawl fishery. In this fishery off the New Jersey, Maryland, Virginia, and North Carolina coasts, many fishing vessels from Massachusetts operate for 6 to 10 weeks during the winter season. Prior to the survey for 1942 the catch of these fish, principally common to these waters, was credited to Massachusetts. Under the present system the catch is credited to the southern port at which it was landed and the vessel, crew, and gear are credited to the port at which the major portion of their catch was landed.

*Publication of Data.*—Statistics of employment in the fisheries, craft and gear engaged, quantity and value of catch, and certain data on industries related to the fisheries are summarized according to the geographic division and published in bulletin form as soon as possible after the completion of each survey. Later, the figures, in more detail, are included in the annual reports of the service entitled "Fishery Statistics of the United States" and in "Alaska Fishery and Fur Seal Industries."

Since 1928, data on the operating units (fishermen, fishing craft, and gear) by counties for the Atlantic Coast and Gulf States have usually been included in the annual statistical reports "Fishery Statistics of the United States" or its predecessor publication "Fishery Industries of the United States." However, funds were not available for the publication of county data for 1932, or the years from 1939 to 1944, inclusive. County data were collected for the areas in which surveys were conducted during those years, and the data are on file in the Washington, D. C. office of the Branch.

## LOCAL AND SPECIAL SURVEYS

*Landings at Certain New England Ports.*—Detailed statistics are collected on the landings of aquatic products by individual fishing craft at Boston, Gloucester, and New Bedford, Massachusetts, and Portland, Maine. Service representatives are permanently stationed at each of these ports. They obtain daily figures on the quantity of fish landed by each fishing craft, the value of such fish landed, the date of departure and arrival of the craft, the grounds from which the fish were taken, and the gear used in their capture. The Branch of Fishery Biology and the Fishery Market News Service cooperate in the collection of these data.

Statistics of the landings at the above ports are released monthly and annually in bulletin form and detailed data are published in annual statistical reports of the Branch. Products of American fisheries received duty free at Boston and Gloucester, Massachusetts, and Portland, Maine, from the treaty coasts of Newfoundland, Magdalen Islands, and Labrador, have not been included in the landings at these ports since 1938. Data on the landings at Boston and Gloucester, Massachusetts have been collected annually since 1893. Some data are also available for these ports for earlier years. Information on landings at Portland, Maine have been collected annually since 1915, and at New Bedford, Massachusetts since 1938.

*Statistics on the Landings of Fish at Seattle, Washington.*—Data on the landings by the United States halibut fleet at this port are assembled by the Service from information collected by the International Fisheries Commission. Generally, the halibut fleet is considered as consisting of those vessels belonging to members of the Fishing Vessel Owner's Association, Inc., which sell their fares through the Seattle Fish Exchange. This fleet originally fished almost exclusively for halibut. With the shortening of the halibut season, particularly in Area II, a portion of the fleet has fished for other species during the closed season for halibut, and has continued selling their fish through the Exchange. Data on other fishery products received by Seattle Wholesale Dealers, including receipts from Alaska and Canada, which appear in this report, are collected by the Service's Seattle representatives. Prior to 1944, receipts from Alaska and British Columbia were not included in the Seattle receipts published in the Statistical Digests. However, since October, 1938, these data were contained in the monthly and annual reports published by the Seattle Fishery Market News Office.

*Shad and Alewife Fisheries.*—Owing to the importance of the Hudson and Potomac Rivers in the production of shad, surveys for statistics of the catch, value of the catch, and operating units are made annually. On the Potomac River similar statistics are also obtained for the alewife fishery. Much of the data required for these surveys are available from the State fishery agencies.

Statistics of the annual shad and alewife fisheries are not published separately in bulletin form. However, a summary of the data is published in the annual Statistical Digest.

Statistics of the shad fishery of the Hudson River are available for 1896, 1897, 1898, 1901, 1904, 1910, and from 1915 to 1945, inclusive, while data for the shad fishery of the Potomac River are available for 1896, 1901, 1904, 1909, 1915, from 1919 to 1942, inclusive, 1944, and 1945. Statistics of the alewife fishery of the Potomac River are available for 1896, 1909, 1915, 1919 to 1942, inclusive, 1944, and 1945.

*Pacific Halibut Fishery.*—Statistics of the Pacific halibut fishery are obtained by the Service's personnel in Seattle, aided by Service representatives in Alaska and the International Fisheries Commission. The fleet classification has been arbitrarily applied by including in the "Washington fleet" all United States and Alaska vessels that land more than half of their catch in that State. All other United States and Alaska vessels of the halibut fleet are included in the "Alaska fleet". Monthly and annual statistical bulletins are available on this fishery, being published along with the statistics of the landings of fishery products at Seattle, Washington and detailed statistics are published in the annual statistical reports of the Branch. Statistics of the landings of halibut at Pacific Coast ports have been collected since 1925.

*Canned Fishery Products and Byproducts.*—Beginning in 1921, the Service has made annual surveys for statistics of the canned fishery products and byproducts industries of every section. These are begun the first week in January of each year for statistics of the production in the preceding year. The Service obtains by mail, so far as possible, the production of canned fishery products or byproducts from each plant in the United States engaged in this business. Where it is impossible to obtain reports by mail, the report is secured by personal visit by the Service's agents. They obtain statistics of the production and value of the production for each commodity by can sizes, case sizes, and trade classifications. The value shown for canned products constitutes the gross amount received by the packer at the production point, no deductions being made for commissions or expenses. Statistics of the canned fishery products and byproducts produced in Alaska are received on the same statements obtained by the Alaska Branch that include statistics of general fishery operations.

Annual statistical bulletins are issued on this trade, and detailed statistics of the output are published in the annual Statistical Digest. In addition to the data obtained on the output of these products annually since 1921, data also usually were obtained prior to 1921 for the years the various sections were surveyed.

*Packaged Fish Trade.*—Statistics of the annual production and value of fish packaged in the United States are obtained as a part of the survey for the statistics of the canned fishery products and byproducts industries. These data are released in bulletin form annually and later in more detailed and adjusted form in the annual Statistical Digest. Statistics of the production of packaged fish are available for 1926 and annually since 1928.

*Cold-Storage Holdings of Fish.*—Information on the monthly freezings and holdings of fishery products is obtained from cold storage warehouses by mail and by Service employees in various cities of the country. Data are also obtained on the holdings of certain cured fish. Bulletins showing these statistics are issued monthly and annually.

Detailed cold-storage statistics also are published in the annual Statistical Digests issued by the Branch. Information regarding cold-storage holdings of fishery products have been published since 1917 and data on quantities of fish frozen, for the years from 1920 to 1925, inclusive and annually since 1928.

*Sponge Market, Tarpon Springs.*—The major proportion of the output of sponges in Florida is sold on the Sponge Exchange at Tarpon Springs. The Service has obtained, from a representative of the Exchange, annual statistics of the quantity and value of the sponges sold by variety. Data on the quantity of sponges marketed by the Exchange is published in the Branch's annual Statistical Digest. Information regarding the transactions on the sponge exchange also are available in bulletin form for 1913, 1914, and for the years since 1917.

*Foreign Fishery Trade.*—Statistics of the foreign fishery trade are obtained from compilations made by the Bureau of the Census, Department of Commerce. Statistics of all known fishery products imported or exported have been assembled and published annually since 1926 in the Branch's Statistical Digest. For earlier years, they are available in the reports of the Bureau of the Census, Bureau of Foreign and Domestic Commerce, the Bureau of Statistics, the Department of Commerce and Labor, or the Treasury Department.

## PRACTICES AND TERMS

Certain practices and terms of importance used in the compilation of fishery statistics are explained below.

*Days Absent.*—In computing "days absent" for vessels landing fares at the various ports, the day of arrival, but not the day of departure is included; thus a vessel leaving port on the 8th of the month and returning on the 15th of the month will be credited with 7 days absence. Prior to 1944, "days absent" included both the day of departure and the day of arrival. Statements appearing in the 1942 and 1943 editions of "Fishery Statistics of the United States" indicating that data on "days absent" for these years did not include the day of departure, were in error. The change in the method of computing "days absent" did not occur until 1944.

*Operating Units.*—Operating units as referred to in this document include persons engaged in the fisheries, and craft and gear employed in the fisheries.

*Vessel.*—The term "vessel" refers to a craft having a capacity of 5 net tons or more.

*Boat.*—The term "boat" refers to a craft having a capacity of less than 5 net tons.

*Incidental Catch.*—The term "incidental catch" refers to the catch of certain species by a type of gear which ordinarily does not capture such species.

*Percentages.*—Percentages are usually shown as whole numbers. Fractions of percents are dropped if less than five-tenths, and the percentage is raised to the next higher integer if the fraction is greater than five-tenths. If the fraction is exactly five-tenths, the integer is raised or lowered to make it an even number.

*Fish.*—The term "fish" as used in this report includes all species belonging to the class Pisces.

*Shellfish, etc.*—A shellfish is an aquatic invertebrate animal having a shell, such as a mollusk, or crustacean. However, in order to reduce the classifications appearing in the catch tables, all items not properly listed as "Fish" or "Whale Products" have been included under "Shellfish, etc." Accordingly, there is included under this classification turtles, frogs, sponges, sea weed, worms, etc.

*Whale Products.*—Since data are not available on the poundage of whales taken, statistics appearing in catch tables on the yield of these animals represent the weight of whale products produced such as meal, sperm oil, whale oil, etc. The values shown represent the amount received by the manufacturer for the products.

*Converting.*—Many of the figures shown in the statistical tables published herewith have been converted to thousands of pounds or dollars. In making these conversions the largest number from which a group of items is computed is raised or lowered to the nearest thousands place. The individual items are adjusted to conform to the total thus obtained.

*Confidential Data.*—The statistical data collected by the Branch are confidential, and unless specific authorization is given, are not divulged in any manner except to employees of the Fish and Wildlife Service whose duties require this information. Statistics on the production of wholesale and manufacturing firms are published only for commodities or geographical areas where the production of three or more firms may be grouped, unless special permission is obtained from the firms involved to release the data.

## CONVERSION FACTORS

It is the policy of the Service to show detailed catch figures of all products in pounds, for the sake of uniformity and for purposes of comparison. This presents little difficulty in the case of fish since in very rare instances are fish reported in units of measure other than pounds. For shellfish, however, the units of measure may be bushels, sacks, barrels, thousands of shellfish, gallons of meats, etc. These many units make standardization difficult, and when combined with the wide variation in the requirements or definitions of some of these units in the various States the problem becomes even more complex.

All bivalve mollusks are reported in pounds of meats in the detailed catch tables presented in this report. In addition, there are included supplementary tables for most of the sections, which give data on the production in bushels. These supplementary tables also give the production of certain other shellfish, such as crabs, in number.

*Oysters.*—Probably the greatest problem in the presentation of fishery statistics in uniform units of measure is in the case of oysters. Usually the production of oysters on the Atlantic and Gulf coasts is reported to Service personnel in bushels; and prior to the data obtained for the year 1930 conversion from bushels to pounds of meats was effected on the basis of a uniform yield of 7 pounds of meats to the bushel. However, investigations have shown considerable variation from this figure. There follows a table which gives the measures used for oysters in the various States and the average yields per bushel. The statistical tables in this report are based on these average yields.

*Other Conversion Factors.*—The principal other conversion factors that have been used in this report are as follows.

Crabs, blue, soft and peelers:

To convert number of crabs to weight in pounds in Connecticut and Florida, divide by 4.3; in Delaware, by 4; in New Jersey, Maryland and Virginia, by 3; in Louisiana, by 2.9; and in North Carolina by 2.4.

Crabs, blue, hard:

In Connecticut, divide by 4.3; in New Jersey and Virginia, by 4; in Maryland, by 3.87; in New York and Delaware, by 3; in Florida, by 2.67; in Alabama, by 2.4; in Louisiana, by 2.05; in North Carolina, South Carolina, Georgia, and Mississippi, by 2; and in Texas, by 1.26.

Crabs, rock:

In Maine, New Hampshire, and Massachusetts, divide by 3; and in Rhode Island, divide by 4.3.

Crabs, stone:

In Florida, divide by 1.

Horseshoe crabs:

In all states, multiply by 3.

Sponges, dried:

In Florida, convert number of bunches to weight in pounds as follows: large wool, multiply by 11; small wool, multiply by 6; wool rags, multiply by 5.03, yellow, multiply by 3, and grass, multiply by 4.

## SECTION 13. - PICTORIAL SECTION

As many of the readers of this publication may not be familiar with all of the species of fish and shellfish, etc., taken commercially in the United States and Alaska, illustrations of many of the various species are included in the following pages. The descriptive material appearing with each species includes the areas in which they are taken commercially and does not constitute the extreme limits in which they occur. Similarly, the gear listed for each species do not represent the only types of apparatus by which these species are obtained, but represent those types of apparatus which are normally used in their capture. The gear do not necessarily appear in the order of their importance.

For more detailed information on the nomenclature of the fishery products listed below, the reader is referred to Section 12 of this publication entitled, "Glossary of Names of Fishery Products".
